

How to draw a 3 circuit Classical Labyrinth

①

This is known as a seed pattern...

②

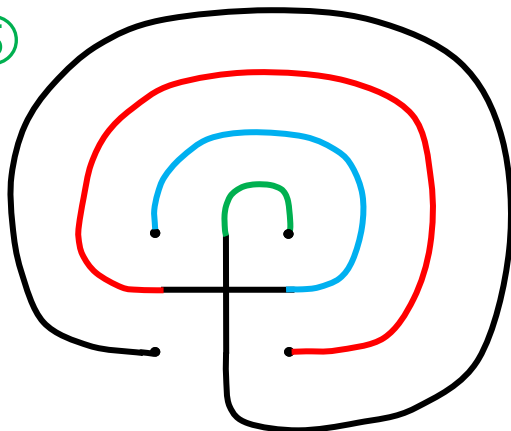

③

④

⑤

It's easy to make a simple labyrinth to walk and pray in your home, chapel, courtyard, garden or beach...you can even mow the pattern into a lawn....

You can see that this labyrinth is actually made up of just 2 lines.

It is easy to lay out with rope, chalk or stones. Lay out the 'red line' first.

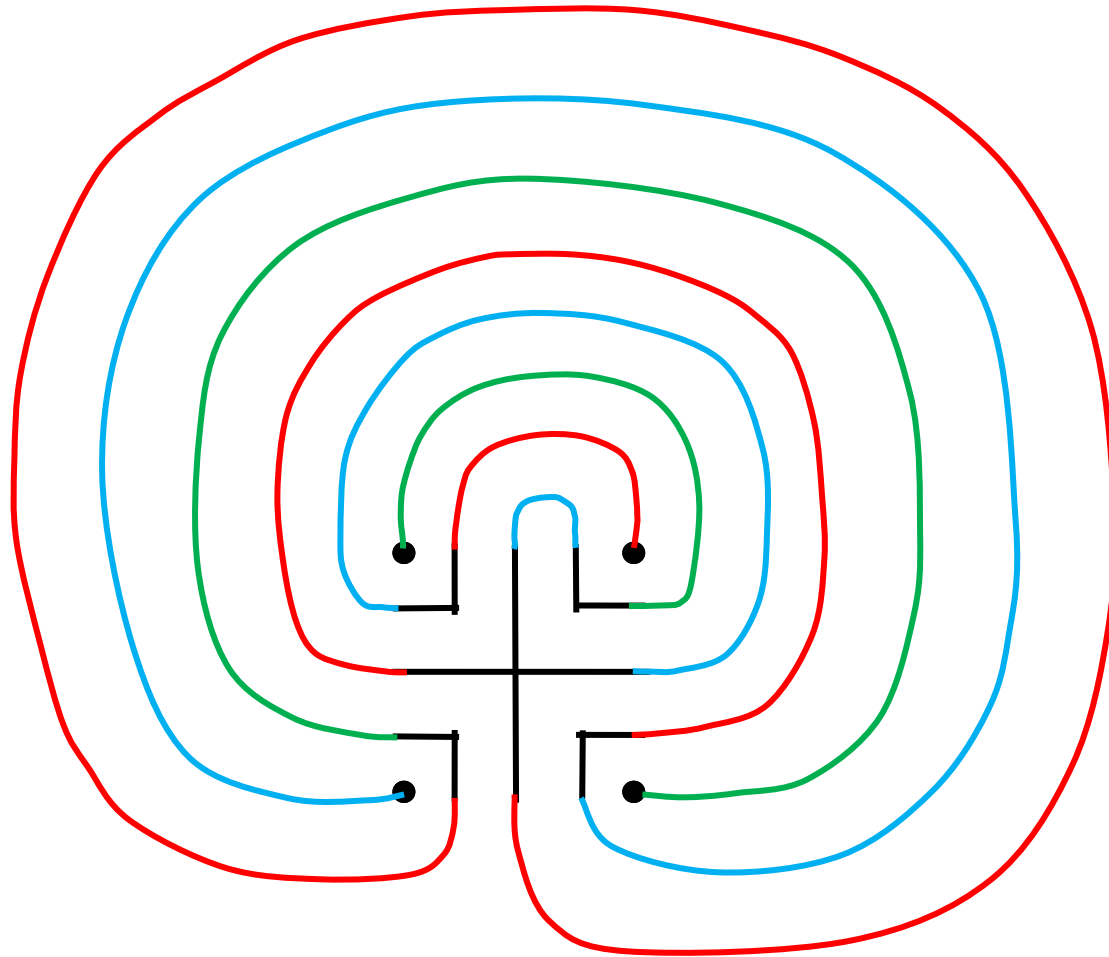

For a path width of 40cms you need approximately 3m² of space, approximately 11.25m of rope or materials for the 'red line' and 12.5m for the 'black line'...

How to draw a 7 circuit Classical Labyrinth

The seed pattern for a 7 circuit labyrinth has the addition of 4 right angles.

The construction format is the same as the simple 3 circuit labyrinth overleaf...

This 7 circuit labyrinth is also made using only two lines...

It takes a little maths to work out widths and distances in order to set one out on the ground... but it can be done!

Excellent help, with a video, is available on the Labyrinthos website www.labyrinthos.net/layout.html

Take away 2 right angles for a 5 circuit labyrinth....

Add 4 more right angles for an 11 circuit labyrinth....!
